Tip. Meaning of sudden increase of remaining bid/offer volume

Sudden increase of Bid Vol can be seen as stronger intention to buy the stock in the market. Sudden increase of Offer Vol can be seen as stronger intention to sell the stock in the market.

When determining simply based on remaining bid/offer volume, sudden increase of Bid Volume increases the likeliness of stock price increasing and sudden increase of Offer Vol increases the likeliness of stock price decreasing.

However, careful trading is required because some manipulators try to strengthen sell after increasing Bid Vol or strengthen buy after increasing Offer Vol
